

Cybersoft Joins Title Insurance Outsourcing Market

*Business Process Outsourcing Company Brings Best Shore Methodology
for the Delivery of Services to the Title Insurance Industry*

SAN FRANCISCO, Calif. – March 16, 2009 – Cybersoft, Inc., an established Business Process Outsourcing (“BPO”) provider to many strategic industries, announced today that they will now provide their best value services to customers in the Title Insurance Industry. The Title Insurance Industry has increasingly turned to BPO providers, both on and offshore, to perform the production process for title insurance transactions. As the Title Insurance Industry continues to struggle with declining revenues, resulting from the ongoing housing market crisis and current economy, there is a growing opportunity for premier BPO companies such as Cybersoft to step up with appropriate and timely solutions. Title insurance companies have been forced to reduce their domestic workforce in order to cut cost, thereby creating a need to supplement their remaining resources with BPO providers that understand the title insurance business and that are capable of providing effective business solutions.

Cybersoft has been providing their outsourcing expertise for over 20 years utilizing evolving technologies and human resources that specialize in assuming complex processes and tasks for customers. Cybersoft has more than one thousand full time college educated, English speaking employees. Cybersoft has supplemented their highly motivated pool of talent with experienced title industry resources and software from the United States to ensure that a Best Shore solution is provided to their new Title Insurance Industry customers.

“With our Best Shore methodology - a multi-shore approach - we ensure that we provide the best value solutions which maximize our customers’ cost savings while delivering superior service and products, thereby giving them the excellent performance they desire,” said Dan Guerrero, President and CEO of Cybersoft. “Processing transactions for the Title Insurance Industry requires a very unique knowledge base and experience level. We have been preparing for our

entry into this market segment for some time now, and are now ready to deliver the same superior level of service that we provide to our customers in other strategic industries. We have built our core business on long-term customer relationships by providing economic value, efficiency, and quality.”

Cybersoft delivers their Best Shore Services by leveraging key resources, no matter where they are located, to provide appropriate solutions to their customers. This approach allows for the best match of offshore and domestic resources to accomplish a best overall performance for customers.

About Cybersoft
